Lands and Environment Manager

**Re: Codrington Pit  
2025 Monitoring Program Report  
File 13-005-00**

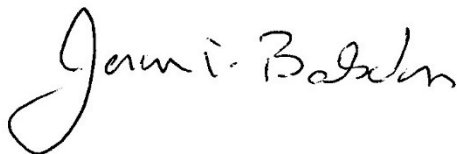

---

ResEnv Consulting Limited (ResEnv) is pleased to submit the 2025 Monitoring Program Report in accordance with the Site Plan and Permit to Take Water Number 8025-A9NQBUB (PTTW) for the Codrington Pit. A summary of the findings is presented in the executive summary at the front of the report. Details are provided in the report text and technical data are appended.

It is understood that CBM Aggregates will report the 2025 water takings to the Ministry of Environment, Conservation and Parks prior to March 31, 2026, in accordance with PTTW.

Thank you for the opportunity to participate in this program. Please contact us if you have any questions.

Yours truly,  
ResEnv Consulting Limited

Jason T. Balsdon, M.A.Sc., P.Eng.  
Consulting Engineer

## EXECUTIVE SUMMARY

CBM Aggregates, a Division of St. Marys Cement Inc. (Canada) (CBM) owns and operates an above water table pit, identified as the Codrington Pit, which is located east of the Village of Codrington, approximately 12 kilometres north of the Town of Brighton. The pit encompasses lands to the south of Ontario Hydro Power Line easement in Parts of Lots 32, 33, and 34, Concession 6, Township of Brighton.

The pit was licenced in accordance with its Site Plan on January 30, 2014, and obtained Permit to Take Water (PTTW) Number 8025-A9NQBU on June 14, 2016, that allows for surface water and groundwater taking for the purpose of pit operations, including material washing and dust control. On October 16, 2023, the PTTW was amended to Number 6568-CVVKYZ to allow for water taking from additional pumping wells on the site. The PTTW expires June 10, 2026. In accordance with the Site Plan, the Baseline Monitoring Program was completed in 2013 and the Performance Monitoring Program was initiated in 2014. The monitoring in 2025 was also completed in accordance with the PTTW. This report presents the monitoring results to the end of 2025.

Based on the findings presented in this report groundwater elevations, depths, and quality showed no unacceptable effects from the pit operations in 2025 and tended to show the typical seasonal patterns observed for baseline conditions. Groundwater quality at the residential water wells continued to reflect natural conditions in 2025, and no formal water well complaints about potential effects of pit operations on water quantity or quality were received from residents in 2025. Surface water flow rates and quality also showed no effects from the pit operations in 2025, but were influenced by the seasonal weather conditions and some erosion of the watercourses that affected water quality during flow from seeps/springs near the property boundary (such as station SWB) to off-site downstream watercourses (such as station SWC).

Groundwater and surface water monitoring and reporting should continue in 2026 as outlined in Section 6 of this report. In addition, it is recommended that an application to renew the PTTW be submitted early in 2026 owing to the typical timeframe required for regulatory approval for PTTW renewals. The current PTTW expires on June 10, 2026.

In accordance with Condition 3.3 of the PTTW, no water may be taken from existing pumping wells PW and PW2 after September 20, 2028, and both pumping wells must be decommissioned. It is suggested that monitoring wells BH05-19 and BH05-20 be decommissioned at the same time as their removal is planned as part of future pit extraction operations.

## 1. INTRODUCTION

CBM owns and operates an above water table pit, identified as the Codrington Pit, which is located east of the Village of Codrington, approximately 12 kilometres north of the Town of Brighton. The pit encompasses lands to the south of Ontario Hydro Power Line easement in Parts of Lots 32, 33, and 34, Concession 6, Township of Brighton. See the Site Location Map of Figure 1 for location details.

The pit was licenced in accordance with its Site Plan on January 30, 2014, and obtained Permit to Take Water (PTTW) Number 8025-A9NQBU on June 14, 2016, that allows for surface water and groundwater taking for the purpose of pit operations, including material washing and dust control. On October 16, 2023, the PTTW was amended to Number 6568-CVVKEYZ to allow for water taking from additional pumping wells on the site. As noted in the copies of the PTTW provided in Appendix A, the permit expires June 10, 2026. In accordance with the Site Plan, the Baseline Monitoring Program was completed in 2013 and the Performance Monitoring Program was initiated in 2014. The monitoring in 2025 was also completed in accordance with the PTTW. This report presents the monitoring results to the end of 2025.

## 2. METHODOLOGY

The following groundwater and surface water monitoring was completed during 2025 in accordance with the monitoring requirements of the Site Plan and PTTW. Details are provided in Table 1 and monitoring locations are shown in Figure 1.

- Quarterly manual groundwater level measurements were obtained for the onsite monitoring wells on March 25, June 10, September 1, and December 16, 2025. Monitoring well construction details are provided in Table B-1 and manual groundwater elevations are presented in Table B-2 and Figure B-1, Appendix B.
- Semiannual sampling was completed for the onsite monitoring wells on March 25 and September 1, 2025. Chemical results are summarized in Table C-1, Appendix C. Parameters were analysed as required, except owing to the laboratory scan package bismuth was not analyzed, but strontium and vanadium were added. There was insufficient water within BH12-1 for the collection of water samples in March and September and within BH05-20 for sample collection in September.
- Annual residential water well monitoring was completed as summarized below. Groundwater levels are presented in Table B-3, Appendix B. Chemical results are provided

in Tables C-2 through C-5, Appendix C. Analytes were the same as those for the onsite monitoring wells, with the addition of bacteria.

ADDRESS	WATER LEVEL DATE	DATE SAMPLED	COMMENTS
2919 County Road 30	September 2	September 2	Sampled directly from well.
230 Old Wooler Road	NA	NA	No access to well granted. Well removed from monitoring program.
268 Old Wooler Road	NA	NA	No access to well granted. Well removed from monitoring program.
488 Old Wooler Road	NA	NA	New owner. No access to well granted. Well removed from monitoring program.
22 Ferguson Hill Road	NA	NA	No access to well granted. Well removed from monitoring program.
232 Aranda Way	September 2	September 2	Sampled directly from well.
263 Aranda Way	September 2	September 2	Sampled directly from well.
130 Jamieson Road	September 2	September 2	Sampled directly from well.

- Semiannual water level monitoring was completed for the three wells at the Codrington Fish Research Centre on March 25 and September 2, 2025. It is noted that the Centre was closed on March 25, which prevented the collection of monitoring data on that date. Results are provided in Table B-4, Appendix B. There is no access to Well 1 that is used for consumption purposes at the Centre.
- Semiannual surface water monitoring at stations SWB and SWC was completed on March 25 and September 1, 2025, although station SWB had insufficient water for sample collection in March and September. Chemical results and flow rates are provided in Table D-1, Appendix D. Watercourse characteristics were used to determine the surface water flow rates. Parameters were analysed as required, except owing to the laboratory scan package bismuth was not analyzed, but strontium and vanadium were added.
- Annual (field parameters) and semiannual (flow rates) surface water monitoring at springs FH-SW1 and FH-SW2 was completed on March 25 and September 2, 2025. It is noted that the Centre was closed on March 25, which prevented the collection of monitoring data on that date. Flow rates and chemical results for the required field parameters are presented in Table D-2, Appendix D. Watercourse characteristics were used to determine the surface water flow rates.
- Precipitation data from the local climatological station in Trenton were documented for use in the assessment of water levels and flow rates. Data prior to each monitoring event are summarized in Table 2.

Laboratory chemical analyses were completed at AGAT Laboratories in Mississauga. Laboratory Certificates of Analysis are on file if required.

## **3. HYDROGEOLOGIC SETTING**

### **3.1 TOPOGRAPHIC AND PHYSIOGRAPHIC SETTING**

The pit is located on an elevated landform, which is approximately 2.5 km wide in an east-west direction and slightly longer in the north-south direction. The landform has a flattened top and is approximately 50 metres (m) higher than the surrounding sand plain.

The maximum natural elevation within the pit is about 204 metres above sea level (m asl) in the western portion of the pit and the minimum elevation is about 180 m asl in the southeastern portion of the pit. A low-lying area at an elevation of about 181 m asl is located in the north-central portion of the pit and is identified to be a seasonal wetland/pond on the topographic mapping. The northern limit of the pit along the Ontario Hydro Power line easement varies between 180 to 195 m asl, and the southern limit varies between 180 and 195 m asl.

The pit is not in the Oak Ridges Moraine physiographic region or the Oak Ridges Moraine Conservation Plan Area (ORMCPA).

### **3.2 GEOLOGIC SETTING**

The main finding of the extensive drilling and recent extraction operations on the pit is that there are substantial amounts of sand and gravelly sand in the subsurface and that a large amount of this material is above the water table. Based on a detailed interpretation of the subsurface findings the subsurface material encountered was grouped into three major units.

#### **Unit 1**

Unit 1 includes silt till and silty fine sand that are generally in the order of about 5 m to 8 m thick, but were detected to be at least 11.9 m to 16.8 m deep within the northwestern corner of the pit. This unit is prominent near surface within the northwestern portion of the site.

#### **Unit 2**

Unit 2 is the main sand and gravel unit present within the pit. The unit is prominent at surface or below Unit 1 in the southern and eastern portions of the pit. The material of Unit 2 is variable in texture and commonly ranges from fine to medium sand with gravel and cobbles (>50%). The gravel-rich areas appear as lenses or beds within the sand, and the gravel content is variable.

### Unit 3

Unit 3 is generally fine to medium sand with an occasional lens of coarser material. The unit is present at depth beneath much of the pit and is generally regarded as marginal for use as aggregate due to its fine-grained texture and lack of gravel. Unit 3 is transitional with Unit 2 and essentially represents the gravel-poor phase of the combined unit.

Boreholes and extraction near the low-lying area in the north-central portion of the site intersected a shallow silt unit (Unit 1) from 0.6 to 8.2 m below ground surface. This fine grained material tends to restrict the downward movement of water and as a result contains a perched water table.

## 3.3 GROUNDWATER SETTING

Groundwater levels within the deep monitoring wells on the pit fluctuate on a seasonal basis as a result of the infiltration of precipitation and snowmelt to the water table that will naturally vary between the four seasons.

The unconfined groundwater table is inferred to be highest in elevation within the central portion of the pit below the historic area of high surface topography and where sand occurs near surface. Within the northwestern portion of the site, the fine grained surficial material (silt and silty fine sand) prevents the rapid infiltration of water to the water table and thus prevents the establishment of high water table levels. The direction of groundwater movement is outward from the groundwater high toward the north, south, east, and west. As expected, no groundwater seeps or springs were identified on the pit. The deep unconfined groundwater table is monitored at monitoring wells: BH05-2, BH05-18, BH05-19, BH06-1, BH12-1, and BH12-2.

A seasonal perched groundwater table occurs within the wetland/pond area within the north-central portion of the pit. It is interpreted that the perched water table is formed as a result of the slow downward movement of groundwater through the underlying silt. The fine grained soil that contains the perched water table is underdrained by the deeper unconfined water table. Groundwater conditions for the perched water table are assessed based on observations at monitoring well BH05-20.

Based on the water table configuration and the surrounding low areas, it is inferred that vertical hydraulic gradients are downward and the pit is located in a groundwater recharge area.

Considering data to May 2008 and the interpreted groundwater table configuration (Jagger Hims Limited, 2009), the pit average base elevation will be about 177.1 m asl (175.6 m asl + 1.5 m) within the central portion of the pit and will vary along the pit perimeter. Updated groundwater elevations for monitoring wells BH12-1 and BH12-2 were also considered in the pit design. Pit base elevations considered the following data.

MONITOR DESIGNATION	MAXIMUM GROUNDWATER ELEVATION (m asl)	DATE	MINIMUM PIT BASE ELEVATION (m asl)
BH05-2	174.74	May 2008	176.3
BH05-18	167.03	April 2007	168.6
BH05-19	159.82	May 2008	161.3
BH06-1	175.62	May 2008	177.1
BH12-1	153.52	November 2012	155.0
BH12-2	173.09	November 2012	174.5

NOTE: 'm asl' indicates meters above sea level.

### 3.4 GROUNDWATER USE

Residential and stock use of groundwater around the pit occurs from both dug wells and drilled wells. Most wells on record with the Ministry of Environment, Conservation and Parks (MECP) are drilled wells, but the results of local water well reconnaissance surveys indicate the presence of a number of dug wells. The dug wells obtain water from an unconfined aquifer, while the drilled wells obtain water from either an unconfined aquifer or deeper confined aquifers.

Eight (8) residential water wells were selected for ongoing monitoring around the pit in accordance with the Site Plan and the PTTW. Only residents at the following four (4) wells continue to grant permission to participate in the ongoing Performance Monitoring Program. Well locations are shown in Figure 1.

- 2919 County Road 30
- 232 Aranda Way
- 263 Aranda Way
- 130 Jamieson Road

In addition, water wells located over 1.5 km west of the pit at the Codrington Fish Research Centre are included in the Performance Monitoring Program. See Figure 1 for location details.

### 3.5 SURFACE WATER

On a regional basis, there are few surface watercourses located within 2 km of the pit. One watercourse is Cold Creek, which is about 1 km south of the pit and flows in an easterly direction. A tributary that contributes to Cold Creek originates within 500 m of the pit, as shown in Figure 1, and flows below Old Wooler Road. The status of this tributary is assessed by monitoring station SWC. It is noted that in 2020 the bridge below Old Wooler Road and immediately upstream of station SWC was replaced with a culvert.

Tributaries of Marsh Creek are located north, west, and east of the pit as summarized below.

- About 1 km west of the pit a tributary flows in a northerly direction toward Murray Marsh, which is located about 2 km northeast of the pit. This tributary has a component of groundwater baseflow that is assessed at stations FH-SW1 and FH-SW2, which are located at the Codrington Fish Research Centre.
- Near the southeastern corner of the pit is a tributary of Marsh Creek. Station SWB allows for the ongoing assessment of groundwater baseflow into this watercourse.
- North of the pit are a number of groundwater seeps and springs that combine with runoff to contribute to surface water flow within tributaries that flow toward Marsh Creek.

## 4. 2025 PIT OPERATION SUMMARY

In 2025, operations at the pit included: material extraction, water taking from pumping wells (Wells PW1 and PW2), and water taking from the Water Storage Pond. There was no extraction below the water table. A site sketch showing the pit conditions in May 2025 (most recent Google Earth image) are provided within Figure 2.

Water within the Settling Pond and Water Storage Pond includes surface water that originates from runoff and groundwater that can be pumped from five pumping wells located near the Settling Pond in accordance with the PTTW. Only Wells PW1 and PW2 were used in 2025. A pumping summary for the groundwater taking is provided below. Material washing and dust control occurred in 2025.

YEAR	PUMP STARTING DATE	PUMP STOPPING DATE	TOTAL PUMPED (Cubic Metres)
2016	August 10	November 9	4,341.5
2017	June 7	November 7	9,766.4
2018	February 27	November 12	17,736.9
2019	April 2	December 8	12,859.0
2020	April 27	October 14	10,621.9
2021	June 3	December 16	1,174.6
2022	March 21	December 12	1,100.0
2023	April 10	December 15	9,244.0
2024	March 1	December 30	5,591.4
2025	January 3	December 22	12,391.5

### 4.1 COMPLAINTS AND RESPONSES

No formal complaints regarding potential effects of pit operations on water quantity or quality were received in 2025.

## 5. MONITORING RESULTS

### 5.1 GROUNDWATER ELEVATIONS AND DEPTHS

Groundwater elevations presented in Figure B-1, Appendix B, generally indicate peak levels during the spring (June) and summer (September) in 2025. It is noted that groundwater levels in 2025 were similar to historic patterns. The effect of the seasonal weather conditions is most apparent at BH05-20 within the low-lying area where the perched groundwater table elevations decreased notably in September 2025. These low water level conditions also occurred historically. Typically, the water levels at BH05-20 increase in the late fall (November) or winter as a result of an increase in the amount of precipitation.

Groundwater Trigger Elevations were established for the onsite monitoring wells based on groundwater elevations measured to the end of 2015. These Trigger Elevations represent the minimum groundwater elevations observed with no detectable effect by pit operations. Groundwater elevations that are detected below the Trigger Elevation will initiate a progressive data review process that includes:

- 1) assessing if the low groundwater elevation is a result of pit operations or if it is a natural occurrence related to climate conditions;
- 2) if the low elevation is related to pit operations, confirmatory water level measurements will be collected;
- 3) if the low elevations related to pit operations are confirmed, then mitigation measures will be implemented.

The Groundwater Trigger Elevations and the minimum manual elevations for 2025 are summarized in the following table.

MONITORING WELL DESIGNATION	GROUNDWATER TRIGGER ELEVATION (m ASL)	MINIMUM 2025 GROUNDWATER ELEVATION (m ASL)	ACCEPTABLE GROUNDWATER ELEVATION (Yes/No)
BH05-2	173.30	173.37	Yes
BH05-18	166.43	166.47	Yes
BH06-1	174.03	174.10	Yes
BH12-1	152.39	152.65	Yes
BH12-2	172.74*	173.39	Yes

NOTES:

- 1) 'm ASL' indicates metres above sea level.
- 2) Original Groundwater Trigger Elevations updated with 2015 groundwater elevations owing to naturally low groundwater elevations in 2015. Includes data from water level transducers measured at 6 hour intervals and quarterly manual water level measurements. '\*' indicates excludes questionable transducer data.
- 3) BH05-19 and BH05-20 removed from Groundwater Trigger Elevation assessment owing to the commencement of onsite pumping in 2016. Both wells are to be decommissioned in accordance with the Site Plan.

The minimum groundwater elevations for 2025 satisfied the Groundwater Trigger Elevations. Therefore, pit operations had no detectable negative impact on groundwater elevations near the pit boundaries in 2025.

Groundwater Trigger Levels were also established for the residential water wells and the water wells located at the Codrington Fish Research Centre. The Groundwater Trigger Depths and the maximum depths for 2025 are summarized in the following table. It is noted that depths are used for the water wells since the geodetic elevations of the wells were not available.

<b>MONITORING WELL DESIGNATION</b>	<b>GROUNDWATER TRIGGER DEPTH (m)</b>	<b>MAXIMUM 2025 GROUNDWATER DEPTH (m)</b>	<b>ACCEPTABLE GROUNDWATER DEPTH (Yes/No)</b>
2919 County Road 30	3.71*	3.99	No
232 Aranda Way	2.39	2.65	No
263 Aranda Way	2.45*	1.94	Yes
130 Jameson Road	3.56	3.68	No
CFRC – Well2	Flowing	Flowing	Yes
CFRC – Well 3	1.55	1.49	Yes
CFRC – Well 4	2.07	1.97	Yes

NOTES:

- 1) 'm' indicates metres.
- 2) '\*' indicates used 2015 level as no baseline levels available.

Residential wells and the wells at the Codrington Fish Research Centre typically showed a decrease in elevation from 2024 to 2025 owing to drier conditions in 2025 relative to 2024. One exception occurred at the well for 130 Jameson Road where the water levels increased in elevation. Considering that: 1) pit operations had no detectable negative effect on groundwater levels at monitoring wells located closer to the pit property limits and 2) the groundwater levels at the residential wells and Codrington Fish Research Centre wells showed a natural response to climatic conditions, it is concluded that the offsite wells were not negatively affected by pit operations in 2025.

In summary, there were no observed unacceptable effects to groundwater elevations or depths from operations at the pit in 2025. The Site Plan provides a Water Well Complaint process that details a mitigation process for complaints from residents about the quality or quantity of water within their water well. This process will also be used if the monitoring program identifies an unacceptable pit effect to the well water.

## 5.2 GROUNDWATER QUALITY

Groundwater Trigger Concentrations were established based on major ions as presented in the Trilinear diagram of Figure 3, as well as based on the Ontario Drinking Water Standards, Objectives, and Guidelines (2006) (ODWSOG) that are included in the chemical summary tables of Tables C-1 through C-5, Appendix C. Major ions include parameters that constitute a major proportion of the water quality, and include: alkalinity, chloride, sulphate, calcium, magnesium, potassium, and sodium.

The Trilinear diagram shows that groundwater obtained from the onsite monitoring wells and the residential water wells in 2025 is generally similar and plots in a similar location to baseline conditions on the diagram. A notable change in groundwater quality will result in a shift in the plotted location of a monitoring well or residential water well on the diagram. Exceptions are as follows.

- Water quality at BH05-20 shows a lower proportion of alkalinity than the other onsite wells. Elevated chloride concentrations also occur relative to baseline conditions.
- Water quality at 2919 County Road 30 and 232 Aranda Way shows a greater proportion of chloride and sodium relative to other residential wells, likely as a result of effects from road salt to adjacent roadways.

Figure C-1 to C-3, Appendix C, provide time concentration graphs for total dissolved solids (TDS), nitrate, and total phosphorous to allow for an assessment of water quality changes with time. In general, the 2025 concentrations for these three parameters are similar to baseline conditions. Groundwater quality at BH05-18 continues to show elevated nutrient concentrations (nitrate), likely as a result of agricultural fertilizers, although concentrations have decreased from 2018 through 2025 owing to less agricultural activities. At BH05-19 the nitrate concentration in groundwater has increased since 2018, likely as a result of pumping that draws the water from below the existing and former agricultural fields, such as near BH05-18, toward BH05-19.

Within the shallow groundwater at BH05-20 below the wetland/pond area the TDS concentrations have been elevated since 2021 compared to pre-2018 concentrations. As pumping does not affect groundwater conditions within the wetland/pond area the increase in the TDS concentrations is not related to the pumping. The only other parameter that shows a notable increase in concentrations since 2021 relative to baseline conditions is chloride. However, as sodium concentrations do not show a similar increase with time, road salt is likely not a cause of the elevated chloride concentrations. Continued monitoring is recommended.

The following table provides the Trigger Concentrations that are based on 75% of the ODWSOG.

PARAMETER	ODWSOG (mg/L)	TRIGGER CONCENTRATION (mg/L)
TDS	500	375
DOC	5.0	3.75
Sulphate	500	375
Chloride	250	188
Nitrate	10.0	7.5
Aluminum	0.1	0.075
Barium	1.0	0.75
Boron	5.0	3.75
Cadmium	0.005	0.0038
Chromium	0.05	0.038
Copper	1	0.75
Iron	0.3	0.225
Lead	0.01	0.075
Manganese	0.05	0.038
Sodium	200	150
Zinc	5	3.75

NOTE: 'mg/L' indicates milligrams per litre.

Nitrate exceeded the Trigger Concentration in groundwater for one monitoring event at BH05-18 (March) and BH05-19 (September). Hardness was excluded from the Trigger Concentrations as groundwater in the area of the pit is naturally hard and typically exceeds the ODWSOG of 100 milligrams per litre (mg/L). For the onsite monitoring wells the level of turbidity also typically exceeded the ODWSOG as a result of the agitation of sediment within the monitoring wells during sampling. At BH05-20 only TDS exceeded the Trigger Concentration in 2025.

The elevated nitrate concentrations have historically occurred during baseline conditions at both BH05-18 and BH05-19 likely as a result of the application of agricultural fertilizers.

Bacteria were detected in each of the residential water wells at one time or another. Only the well at County Road 2919 exceeded a Trigger Concentration in 2025, which was for TDS.

In summary, there were no observed negative effects on groundwater quality from operations at the pit in 2025.

### 5.3 SURFACE WATER FLOW RATES

Surface water flow rates show a notable difference between stations SWB and SWC as presented in Figure D-1, Appendix D. Station SWB is located right at the groundwater discharge point and thus the flow rates reflect local groundwater elevations. Seasonal patterns or influences from precipitation and overland flow are not apparent. As shown in the following table, the flow rates at SWB for 2025 were low compared to historic baseline flows (2013 to 2015). As the pit

operations have not decreased groundwater levels near the pit boundaries, the low flow rates for 2025 reflect natural low flow conditions.

STATION	TRIGGER FLOW RATES (2013 to 2015) (L/s)	2025 FLOW RATES (L/s)
SWB	0.2 – 1.67	<0.1
SWC	<1 – 51.9	<1 – 15.5
FH-SW1	2.3 – 7.4	4.1
FH-SW2	4.9 – 69.4	Dry

NOTES:

- 1) 'L/s' indicates litres per second.
- 2) Trigger Flow Rates include flow rates measured prior to pumping at the pit.

At station SWC the surface water flow rates show an influence from groundwater baseflow, precipitation, and overland flow. A seasonal pattern of flow rates is apparent with greater flow rates during the spring (March) and lower flow rates during the summer and fall (September). As shown in the table provided above, the flow rates at SWC for 2025 were within the flow rate range for baseline conditions.

At the Codrington Fish Research Centre, the flow rates at stations FH-SW1 and FH-SW2 were within or less than the historic ranges as noted above and shown in Figure D-5, Appendix D. FH-SW1 is located right at a groundwater discharge point, whereas as FH-SW2 is located further from the spring source and shows an influence from groundwater baseflow, precipitation, and overland flow. As local groundwater elevations and surface water flows have not been negatively influenced by pit operations, the flow rates at the Codrington Fish Research Centre are attributed to natural conditions.

## 5.4 SURFACE WATER QUALITY

Surface Water Trigger Concentrations were established based on major ions as presented in the Trilinear diagram of Figure 3, as well as based on the Provincial Water Quality Objectives (1994 plus updates) (PWQO) that are included in the chemical summary tables of Tables D-1 and D-2, Appendix D.

The Trilinear diagram shows that the surface water quality is similar to groundwater quality. A notable change in surface water quality will result in a shift in the plotted location of a station on the diagram.

Figures D-2 to D-4, Appendix D, provide time concentration graphs for total dissolved solids (TDS), nitrate, and total phosphorous to allow for an assessment of water quality changes with time. In general, the 2025 concentrations for these three parameters are similar to baseline

conditions. Historically, with surface water at station SWB generally showed similar to lower concentrations than at station SWC.

The following table provides the Trigger Concentrations that are based on 75% of the PWQO.

PARAMETER	PWQO (µg/L)	TRIGGER CONCENTRATION (µg/L)
Ammonia (unionized)	0.02*	<0.02**
Aluminum	75	56
Beryllium	1100	825
Boron	200	150
Cadmium	0.5	0.375
Chromium	8.9	6.68
Cobalt	0.9	0.68
Copper	5	3.75
Iron	300	225
Lead	25.0	18.8
Molybdenum	40	30
Nickel	25	18.8
Phosphorus	30	22.5
Silver	0.1	0.1**
Vanadium	6	4.5
Zinc	20	15

NOTES:

- 1) 'µg/L' indicates micrograms per litre.
- 2) '\*\*' indicates value is milligrams per litre (mg/L).
- 3) '\*\*\*' indicates Trigger Concentration is analytical method detection limit.

Surface water quality naturally satisfies the Trigger Concentrations and PWQO, except for total phosphorus (March) at station SWC plus for cobalt, iron, total phosphorus, vanadium, and zinc at station SWC (September). Concentrations for total phosphorus are representative of local baseline groundwater quality prior to pit operations. The elevated concentrations of metals in surface water during the September monitoring event are attributed to sediment disturbance while sampling during low flow conditions. A historic pattern of note is that parameter concentrations in surface water tend to be greater at station SWC compared to station SWB, likely as a result of the contribution of overland flow and its influence on soil erosion at station SWC.

In summary the surface water quality shows no negative effects from the pit operations.

## 6. 2026 MONITORING PROGRAM

Based on the 2025 monitoring program findings, it is recommended that the Performance Monitoring Program detailed in the Site Plan and PTTW, and presented in Table 1, be continued in 2026. The 2026 Monitoring Program Report should be completed prior to March 31, 2027.

## 7. CONCLUSIONS AND RECOMMENDATIONS

Based on the findings presented in this report, we are pleased to provide the following conclusions.

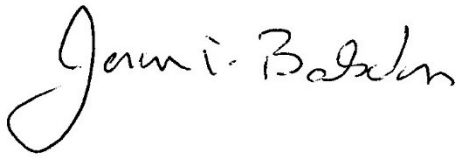

- Groundwater elevations, depths, and quality showed no unacceptable effects from the pit operations in 2025 and tended to show the typical seasonal patterns observed for baseline conditions. Groundwater quality at the residential water wells continued to reflect natural conditions in 2025 and no formal water well complaints about pit operations were received from residents in 2025.
- Surface water flow rates and quality showed no effects from the pit operations in 2025, but were influenced by the seasonal weather conditions and some erosion of the watercourses.

The following recommendations are provided for consideration in 2026.

- Groundwater and surface water monitoring and reporting should continue in 2025 as outlined in Section 6 of this report.
- An application to renew the PTTW should be submitted in early 2026 owing to the typical timeframe required for regulatory approval for PTTW renewals. The current PTTW expires on June 10, 2026.

- In accordance with Condition 3.3 of the PTTW, no water may be taken from existing pumping wells PW and PW2 after September 20, 2028, and both pumping wells must be decommissioned. It is suggested that monitoring wells BH05-19 and BH05-20 be decommissioned at the same time as their removal is planned as part of future pit extraction operations.

Permit To Take Water Number 8025-  
A9NQBU

---

**AMENDED PERMIT TO TAKE WATER**  
Surface and Ground Water  
NUMBER 6568-CVVKYZ

*Pursuant to Section 34.1 of the Ontario Water Resources Act, R.S.O. 1990 this Permit To Take Water is hereby issued to:*

St. Marys Cement Inc. (Canada)  
55 Industrial St  
Toronto, Ontario, M4G 3W9  
Canada

*For the water taking from:* Settling Pond Network,  
Pumping Well - PW or PW4,  
Pumping Well - PW2 or PW3 or PW5

*Located at:* Lot 33, Concession 6, Geographic Township of Murray  
Brighton, County of Northumberland

*For the purposes of this Permit, and the terms and conditions specified below, the following definitions apply:*

**DEFINITIONS**

- (a) "Director" means any person appointed in writing as a Director pursuant to section 5 of the OWRA for the purposes of section 34.1, OWRA.
- (b) "Provincial Officer" means any person designated in writing by the Minister as a Provincial Officer pursuant to section 5 of the OWRA.
- (c) "Ministry" means Ontario Ministry of the Environment, Conservation and Parks.
- (d) "District Office" means the Peterborough District Office.
- (e) "Permit" means this Permit to Take Water No. 6568-CVVKYZ including its Schedules, if any, issued in accordance with Section 34.1 of the OWRA.
- (f) "Permit Holder" means St. Marys Cement Inc. (Canada).
- (g) "OWRA " means the *Ontario Water Resources Act*, R.S.O. 1990, c. O. 40, as amended.

*You are hereby notified that this Permit is issued subject to the terms and conditions outlined below:*

## **TERMS AND CONDITIONS**

### **1. Compliance with Permit**

- 1.1 Except where modified by this Permit, the water taking shall be in accordance with the application for this Permit To Take Water, dated April 14, 2023 and signed by David Hanratty, and all Schedules included in this Permit.
- 1.2 The Permit Holder shall ensure that any person authorized by the Permit Holder to take water under this Permit is provided with a copy of this Permit and shall take all reasonable measures to ensure that any such person complies with the conditions of this Permit.
- 1.3 Any person authorized by the Permit Holder to take water under this Permit shall comply with the conditions of this Permit.
- 1.4 This Permit is not transferable to another person without the Director's written consent.
- 1.5 This Permit provides the Permit Holder with permission to take water in accordance with the conditions of this Permit, up to the date of the expiry of this Permit. This Permit does not constitute a legal right, vested or otherwise, to a water allocation, and the issuance of this Permit does not guarantee that, upon its expiry, it will be renewed.
- 1.6 The Permit Holder shall keep this Permit available at all times at or near the site of the taking, and shall produce this Permit immediately for inspection by a Provincial Officer upon his or her request.
- 1.7 The Permit Holder shall report any changes of address to the Director within thirty days of any such change. The Permit Holder shall report any change of ownership of the property for which this Permit is issued within thirty days of any such change.

### **2. General Conditions and Interpretation**

#### **2.1 Inspections**

The Permit Holder must forthwith, upon presentation of credentials, permit a Provincial Officer to carry out any and all inspections authorized by the OWRA, the *Environmental Protection Act*, R.S.O. 1990, the *Pesticides Act*, R.S.O. 1990, or the *Safe Drinking Water Act*, S. O. 2002.

#### **2.2 Other Approvals**

The issuance of, and compliance with this Permit, does not:

- (a) relieve the Permit Holder or any other person from any obligation to comply with any other applicable legal requirements, including the provisions of the *Ontario Water Resources Act*, and

the *Environmental Protection Act* , and any regulations made thereunder; or

(b) limit in any way any authority of the Ministry, a Director, or a Provincial Officer, including the authority to require certain steps be taken or to require the Permit Holder to furnish any further information related to this Permit.

### 2.3 Information

The receipt of any information by the Ministry, the failure of the Ministry to take any action or require any person to take any action in relation to the information, or the failure of a Provincial Officer to prosecute any person in relation to the information, shall not be construed as:

(a) an approval, waiver or justification by the Ministry of any act or omission of any person that contravenes this Permit or other legal requirement; or

(b) acceptance by the Ministry of the information's completeness or accuracy.

### 2.4 Rights of Action

The issuance of, and compliance with this Permit shall not be construed as precluding or limiting any legal claims or rights of action that any person, including the Crown in right of Ontario or any agency thereof, has or may have against the Permit Holder, its officers, employees, agents, and contractors.

### 2.5 Severability

The requirements of this Permit are severable. If any requirements of this Permit, or the application of any requirements of this Permit to any circumstance, is held invalid or unenforceable, the application of such requirements to other circumstances and the remainder of this Permit shall not be affected thereby.

### 2.6 Conflicts

Where there is a conflict between a provision of any submitted document referred to in this Permit, including its Schedules, and the conditions of this Permit, the conditions in this Permit shall take precedence.

## 3. **Water Takings Authorized by This Permit**

### 3.1 **Expiry**

This Permit expires on **June 10, 2026**. No water shall be taken under authority of this Permit after the expiry date.

### 3.2 Amounts of Taking Permitted

The Permit Holder shall only take water from the source, during the periods and at the rates and amounts of taking specified in Table A. Water takings are authorized only for the purposes specified in Table A.

**Table A**

	Source Name / Description:	Source: Type:	Taking Specific Purpose:	Taking Major Category:	Max. Taken per Minute (litres):	Max. Num. of Hrs Taken per Day:	Max. Taken per Day (litres):	Max. Num. of Days Taken per Year:	Zone/ Easting/ Northing:
1	Settling Pond Network	Pond Dugout	Aggregate Washing	Industrial	9,092	12	6,546,240	313	18 277971 4892987
2	Pumping Well -PW	Well Drilled	Aggregate Washing	Industrial	60	24	86,400	313	18 277903 4892829
3	Pumping Well -PW2	Well Drilled	Aggregate Washing	Industrial	60	24	86,400	313	18 278018 4893082
4	Pumping Well -PW3	Well Drilled	Aggregate Washing	Industrial	60	24	86,400	313	18 277958 4893092
5	Pumping Well -PW4	Well Drilled	Aggregate Washing	Industrial	60	24	86,400	313	18 277896 4892874
6	Pumping Well -PW5	Well Drilled	Aggregate Washing	Industrial	60	24	86,400	313	18 278010 4893086
							<b>Total Taking:</b>	6,719,040	

- 3.3 Notwithstanding Table A, no water shall be taken from pumping well PW and PW2 after September 20, 2028. The Permit Holder shall ensure that the wells are decommissioned in accordance with Ontario Wells Regulation 903, under the Ontario Water Resources Act, R.S.O. 1990, c. O.40.
- 3.4 Notwithstanding Table A, the total combined volume of water taking from pumping wells PW and PW4 shall not exceed 86,400 L/day.
- 3.5 Notwithstanding Table A, the total combined volume of water taking from pumping well PW2, PW3, and PW5 shall not exceed 86,400 L/day.

#### **4. Monitoring**

- 4.1 The Permit Holder shall maintain a record of all water takings. This record shall include the dates and times of water takings and the total measured amounts of water taken per day for each day that water is taken under the authorization of this Permit. A separate record shall be maintained for each source. The Permit Holder shall keep all required records up to date and available at or near the site of the taking and shall produce the records immediately for inspection by a Provincial Officer upon request.
- 4.2 The total amounts of water taken shall be measured using a flow meter and totalizer.

4.3 The "Performance Monitoring Program" shall be undertaken as described in the application for this Permit however the following two changes shall also be incorporated into the program:

1) The domestic wells at 230 Old Wooler Road and 22 Ferguson Hill Road shall be explicitly added to the monitoring program and the frequency of water level measurement shall be quarterly at these wells (with the permission of the well owner); and,

2) Groundwater trigger depths shall be determined for the domestic wells at 230 Old Wooler Road and 22 Ferguson Hill Road. This information shall be determined prior to any water taking at pumping wells PW or PW2. These domestic wells shall be added to the overall monitoring, assessment and contingency programs described in the application for this Permit.

If the domestic well owners that are part of the "Performance Monitoring Program" for the site do not provide access for monitoring of their well(s), this information shall be provided to the Director in writing within 60 days of the refusal to provide access.

4.4 The Permit Holder shall retain a qualified person to prepare and submit a report to the Ministry on an annual basis prior to March 31 of each year. The report shall include (but not be limited to) the following items:

(i) an analysis of the monitoring results and daily water takings; and,

(ii) provide conclusions and make recommendations based on the monitoring results.

## **5. Impacts of the Water Taking**

### **5.1 Notification**

The Permit Holder shall immediately notify the local District Office of any complaint arising from the taking of water authorized under this Permit and shall report any action which has been taken or is proposed with regard to such complaint. The Permit Holder shall immediately notify the local District Office if the taking of water is observed to have any significant impact on the surrounding waters. After hours, calls shall be directed to the Ministry's Spills Action Centre at 1-800-268-6060.

### **5.2 For Surface-Water Takings**

The taking of water (including the taking of water into storage and the subsequent or simultaneous withdrawal from storage) shall be carried out in such a manner that streamflow is not stopped and is not reduced to a rate that will cause interference with downstream uses of water or with the natural functions of the stream.

### **For Groundwater Takings**

If the taking of water is observed to cause any negative impact to other water supplies obtained from any adequate sources that were in use prior to initial issuance of a Permit for this water taking, the Permit Holder shall take such action necessary to make available to those affected, a

supply of water equivalent in quantity and quality to their normal takings, or shall compensate such persons for their reasonable costs of so doing, or shall reduce the rate and amount of taking to prevent or alleviate the observed negative impact. Pending permanent restoration of the affected supplies, the Permit Holder shall provide, to those affected, temporary water supplies adequate to meet their normal requirements, or shall compensate such persons for their reasonable costs of doing so.

If permanent interference is caused by the water taking, the Permit Holder shall restore the water supplies of those permanently affected.

5.3 Prevention of Adverse Effects:

The Permit Holder shall ensure the taking of water under authority of this Permit does not result in an adverse effect on area waters.

5.4 Prevention of Structural Adverse Effects:

The Permit Holder shall take all measures necessary to prevent damage to buildings, bridges, structures, roads and/or railway lines that may be impacted either directly or indirectly by this taking.

**6. Director May Amend Permit**

The Director may amend this Permit by letter requiring the Permit Holder to suspend or reduce the taking to an amount or threshold specified by the Director in the letter. The suspension or reduction in taking shall be effective immediately and may be revoked at any time upon notification by the Director. This condition does not affect your right to appeal the suspension or reduction in taking to the Environmental Review Tribunal under the *Ontario Water Resources Act*, Section 100 (4).

*The reasons for the imposition of these terms and conditions are as follows:*

1. Condition 1 is included to ensure that the conditions in this Permit are complied with and can be enforced.
2. Condition 2 is included to clarify the legal interpretation of aspects of this Permit.
3. Conditions 3 through 6 are included to protect the quality of the natural environment so as to safeguard the ecosystem and human health and foster efficient use and conservation of waters. These conditions allow for the beneficial use of waters while ensuring the fair sharing, conservation and sustainable use of the waters of Ontario. The conditions also specify the water takings that are authorized by this Permit and the scope of this Permit.

*In accordance with Section 100 of the Ontario Water Resources Act, R.S.O. 1990, you may by written notice served upon me, the Environmental Review Tribunal and the Minister of the Environment, Conservation and Parks, within 15 days after receipt of this Notice, require a hearing by the Tribunal. The Minister of the Environment, Conservation and Parks will place notice of your appeal on the Environmental Registry. Section 101 of the Ontario Water Resources Act, as amended provides that the Notice requiring a hearing shall state:*

1. The portions of the Permit or each term or condition in the Permit in respect of which the hearing is required, and;
2. The grounds on which you intend to rely at the hearing in relation to each portion appealed.

*In addition to these legal requirements, the Notice should also include:*

- a. The name of the appellant;
- b. The address of the appellant;
- c. The Permit to Take Water number;
- d. The date of the Permit to Take Water;
- e. The name of the Director;
- f. The municipality within which the works are located;

*This notice must be served upon:*

*The Secretary  
Environmental Review Tribunal  
Registrar

**NOTES:**

- 1) "m asl" indicates metres above sea level.
- 2) "\*" denotes water level based on pressure transducer owing to manual measurement interference by bentonite on well pipe sides.
- 3) CFRC indicates Codrington Fish Research Centre. No elevation survey of wells, thus depths below top of casing are provided.
- 4) Blank indicates water level not measured.
- 5) NM indicates not measured.

NOTES:

1. ODWQO indicates Ontario Drinking Water Objectives (2006).
2. Bolding and shading denotes concentration exceeds ODWQO.
3. mg/L indicates milligrams per litre.
4. Blank denotes no ODWQO or parameter not tested..
5. \*\*\* indicates value based on lab value.

NOTES:

1. ODWQO indicates Ontario Drinking Water Objectives (2006).
2. Bolding and shading denotes concentration exceeds ODWQO.
3. mg/L indicates milligrams per litre.
4. Blank denotes no ODWQO or parameter not tested..
5. "\*" indicates value based on lab value.

NOTES:

1. ODWQO indicates Ontario Drinking Water Objectives (2006).
2. Bolding and shading denotes concentration exceeds ODWQO.
3. mg/L indicates milligrams per litre.
4. Blank denotes no ODWQO or parameter not tested..
5. \*\*\* indicates value based on lab value.

NOTES:

1. OWDWO indicates Ontario Drinking Water Objectives (2006).
2. Bolding and shading denotes concentration exceeds ODWQO.
3. mg/L indicates milligrams per litre.
4. Blank denotes no ODWQO or parameter not tested..
5. \*\*\* indicates value based on lab value.

NOTES:

1. OWDWO indicates Ontario Drinking Water Objectives (2006).
2. Bolding and shading denotes concentration exceeds ODWQO.
3. mg/L indicates milligrams per litre.
4. Blank denotes no ODWQO or parameter not tested..
5. \*\*\* indicates value based on lab value.

**NOTES:**

1. ODWSOG - Ontario Drinking Water Standards, Objectives and Guidelines (2003), updated June 2006.
2. (\*) denotes health related drinking water standard.
3. OG denotes the Operational Guidelines.
4. AO denotes Aesthetic Objective.
5. Bolding and shading denotes concentration exceeds ODWSOG.
6. mg/L indicates milligrams per litre. ug/L indicates micrograms per litre.
7. Blank denotes no ODWSOG has been set yet.
8. CFU/100ml denotes number of colony forming units per 100 millilitres of water.
9. "<" denotes less than detection limit (not detected).

**NOTES:**

1. ODWSOG - Ontario Drinking Water Standards, Objectives and Guidelines (2003), updated June 2006.
2. (\*) denotes health related drinking water standard.
3. OG denotes the Operational Guidelines.
4. AO denotes Aesthetic Objective.
5. Bolding and shading denotes concentration exceeds ODWSOG.
6. mg/L denotes milligrams per litre.
7. Blank denotes no ODWSOG has been set yet.
8. CFU/100ml denotes number of colony forming units per 100 millilitres of water.
9. "<" denotes less than detection limit (not detected).

- NOTES:
1. PWQO indicates Provincial Water Quality Objectives (1994 plus updates).
  2. Bolding and shading denotes concentration exceeds PWQO.
  3. mg/L indicates milligrams per litre; µg/L denotes microgram per litre.
  4. Blank denotes no PWQO or parameter not tested..
  5. EF indicates equipment failure.

- NOTES:
1. PWQO indicates Provincial Water Quality Objectives (1994 plus updates).
  2. Bolding and shading denotes concentration exceeds PWQO.
  3. mg/L indicates milligrams per litre; µg/L denotes microgram per litre.
  4. Blank denotes no PWQO or parameter not tested.
  5. EF indicates equipment failure.
