Attention: Mr. Colin Evans
Director, Lands and Environment

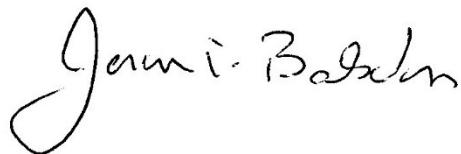

**Re: Codrington Pit
2021 Monitoring Program Report
File 13-005-00**

ResEnv Consulting Limited (ResEnv) is pleased to submit the draft 2021 Monitoring Program Report in accordance with the Site Plan and Permit to Take Water Number 8025-A9NQBU (PTTW) for the Codrington Pit. A summary of the findings is presented in the executive summary at the front of the report. Details are provided in the report text and technical data are appended.

It is understood that St. Marys Cement Inc. (Canada) will report the 2021 water takings to the Ministry of Environment, Conservation and Parks prior to March 31, 2022, in accordance with PTTW.

Thank you for the opportunity to participate in this program. Please contact us if you have any questions.

Yours truly,
ResEnv Consulting Limited

Jason T. Balsdon, M.A.Sc., P.Eng.
Consulting Engineer

EXECUTIVE SUMMARY

St. Marys Cement Inc. (Canada), known locally as CBM Aggregates, owns and operates an above water table pit that is located east of the Village of Codrington, approximately 12 kilometres north of the Town of Brighton. This pit is identified as the Codrington Pit. The pit encompasses lands to the south of Ontario Hydro Power Line easement in Parts of Lots 32, 33, and 34, Concession 6, Township of Brighton.

The pit was licenced in accordance with its Site Plan on January 30, 2014, and obtained Permit to Take Water Number 8025-A9NQBU (PTTW) on June 14, 2016, that allows for surface water and groundwater taking for the purpose of pit operations, including material washing and dust control. In accordance with the Site Plan, the Baseline Monitoring Program was completed in 2013 and the Performance Monitoring Program was initiated in 2014. The monitoring in 2021 was also completed in accordance with the PTTW. This report presents the monitoring results to the end of 2021.

Based on the findings presented in this report groundwater elevations, depths, and quality showed no unacceptable effects from the pit operations in 2021 and tended to show the typical seasonal patterns observed for baseline conditions. Groundwater quality at the residential water wells continued to reflect natural conditions in 2021, and no formal water well complaints about potential effects of pit operations on water quantity or quality were received from residents in 2021. Surface water flow rates and quality also showed no effects from the pit operations in 2021, but were influenced by the seasonal weather conditions and some erosion of the watercourses.

Groundwater and surface water monitoring and reporting should continue in 2022 as outlined in Section 6 of this report.

It is understood that St. Marys Cement Inc. (Canada) will report the 2021 water takings to the Ministry of the Environment, Conservation and Parks prior to March 31, 2022, in accordance with PTTW.

1. INTRODUCTION

St. Marys Cement Inc. (Canada), known locally as CBM Aggregates, owns and operates an above water table pit that is located east of the Village of Codrington, approximately 12 kilometres (km) north of the Town of Brighton. This pit is identified as the Codrington Pit. The pit encompasses lands to the south of Ontario Hydro Power Line easement in Parts of Lots 32, 33, and 34, Concession 6, Township of Brighton. See the Site Location Map of Figure 1 for location details.

The pit was licenced in accordance with its Site Plan on January 30, 2014, and obtained Permit to Take Water Number 8025-A9NQBU (PTTW) on June 14, 2016, that allows for surface water and groundwater taking for the purpose of pit operations, including material washing and dust control. As noted in the copy of the PTTW provided in Appendix A, the permit expires June 10, 2026. In accordance with the Site Plan, the Baseline Monitoring Program was completed in 2013 and the Performance Monitoring Program was initiated in 2014. The monitoring in 2021 was also completed in accordance with the PTTW. This report presents the monitoring results to the end of 2021.

2. METHODOLOGY

The following groundwater and surface water monitoring was completed during 2021 in accordance with the monitoring requirements of the Site Plan and PTTW. Details are provided in Table 1 and monitoring locations are shown in Figure 1.

- Quarterly manual groundwater level measurements were obtained for the onsite monitoring wells on March 23, June 8, September 13, and December 16, 2021. Monitor construction details are provided in Table B-1 and manual groundwater elevations are presented in Table B-1 and Figure B-1, Appendix B.
- Water level data were also downloaded in September from the automated transducers that measure groundwater levels within the monitoring wells at 6 hour intervals. Transducers within BH05-2, BH05-20, and BH12-1 were not operational in 2021 and could not be downloaded. As the transducers are not required for the approved monitoring program and the remaining transducers will likely cease to operate in 2022, the transducers will be removed from the monitoring program in 2022. The water levels from the transducers have been collected since 2012 and provide a detailed presentation of seasonal water level fluctuations during the start-up and operation of the pit. Data are presented in Figures B-2 through B-8, Appendix B.

- Semiannual sampling was completed for the onsite monitoring wells on March 23 and September 13, 2021. Chemical results are summarized in Table C-1, Appendix C. Parameters were analysed as required, except owing to the laboratory scan package bismuth was not analyzed, but strontium and vanadium were added. There was insufficient water within BH12-1 for the analysis of field parameters.
- Annual residential water well monitoring was completed as summarized below. Groundwater levels are presented in Table B-3, Appendix B. Chemical results are provided in Tables C-2 through C-6, Appendix C. Analytes were the same as those for the onsite monitoring wells, with the addition of bacteria.

ADDRESS	WATER LEVEL DATE	DATE SAMPLED	COMMENTS
[REDACTED]	September 14	September 14	Sampled directly from well.
[REDACTED]	NA	NA	No access to well granted. Well removed from monitoring program.
[REDACTED]	NA	NA	No access to well granted. Well removed from monitoring program.
[REDACTED]	NA	NA	New owner. No access to well granted. Well removed from monitoring program.
[REDACTED]	NA	NA	No access to well granted. Well removed from monitoring program.
[REDACTED]	September 14	September 14	Sampled directly from well.
[REDACTED]	September 14	September 14	Sampled directly from well.
[REDACTED]	September 14	September 14	Sampled directly from well.

- Semiannual water level monitoring was completed for the three wells at the Codrington Fish Research Centre on March 23 and September 13, 2021. Results are provided in Table B-4, Appendix B. There is no access to Well 1 that is used for consumption purposes at the centre.
- Semiannual surface water monitoring at stations SWB and SWC was completed on March 23 and September 13, 2021. Chemical results and flow rates are provided in Table D-1, Appendix D. Watercourse characteristics were used to determine the surface water flow rates. Parameters were analysed as required, except owing to the laboratory scan package bismuth was not analyzed, but strontium and vanadium were added.
- Annual (field parameters) and semiannual (flow rates) surface water monitoring at springs FH-SW1 and FH-SW2 was completed on March 13 and September 14, 2021. Flow rates and chemical results for the required field parameters are presented in Table D-2, Appendix D. Watercourse characteristics were used to determine the surface water flow rates.

- Precipitation data from the local climatological stations in Trenton or Belleville were documented for use in the assessment of water levels and flow rates. Data prior to each monitoring event are summarized in Table 2.

Laboratory chemical analyses were completed at AGAT Laboratories in Mississauga. Laboratory Certificates of Analysis are on file if required.

3. HYDROGEOLOGIC SETTING

3.1 TOPOGRAPHIC AND PHYSIOGRAPHIC SETTING

The pit is located on a hill, which is approximately 2.5 km wide in an east-west direction and slightly longer in the north-south direction. The hill has a flattened top and is approximately 50 metres (m) higher than the surrounding sand plain.

The maximum natural elevation within the pit is about 204 metres above sea level (m asl) in the western portion of the pit and the minimum elevation is about 180 m asl in the southeastern portion of the pit. A low-lying area at an elevation of about 181 m asl is located in the north-central portion of the pit and is identified to be a seasonal wetland/pond on the topographic mapping. The northern limit of the pit along the Ontario Hydro Power line easement varies between 180 to 195 m asl, and the southern limit varies between 180 and 195 m asl.

The pit is not in the Oak Ridges Moraine physiographic region or the Oak Ridges Moraine Conservation Plan Area (ORMCPA).

3.2 GEOLOGIC SETTING

The main finding of the extensive drilling and recent extraction operations on the pit is that there are substantial amounts of sand and gravelly sand in the subsurface and that a large amount of this material is above the water table. Based on a detailed interpretation of the subsurface findings the subsurface material encountered was grouped into three major units.

Unit 1

Unit 1 includes silt till and silty fine sand that are generally in the order of about 5 m to 8 m thick, but were detected to be at least 11.9 m to 16.8 m deep within the northwestern corner of the pit. This unit is prominent near surface within the northwestern portion of the site.

Unit 2

Unit 2 is the main sand and gravel unit present within the pit. The unit is prominent at surface or below Unit 1 in the southern and eastern portions of the pit. The material of Unit 2 is variable in texture and commonly ranges from fine to medium sand with gravel and cobbles (>50%). The gravel-rich areas appear as lenses or beds within the sand, and the gravel content is variable.

Unit 3

Unit 3 is generally fine to medium sand with an occasional lens of coarser material. The unit is present at depth beneath much of the pit and is generally regarded as marginal for use as aggregate due to its fine-grained texture and lack of gravel. Unit 3 is transitional with Unit 2 and essentially represents the gravel-poor phase of the combined unit.

Boreholes and extraction near the low-lying area in the north-central portion of the site intersected a shallow silt unit (Unit 1) from 0.6 to 8.2 m below ground surface. This fine grained material tends to restrict the downward movement of water and as a result contains a perched water table.

3.3 GROUNDWATER SETTING

Groundwater levels within the deep monitoring wells on the pit fluctuate on a seasonal basis as a result of the infiltration of precipitation and snowmelt to the water table that will naturally vary between the fall, winter, and spring.

The unconfined groundwater table is inferred to be highest in elevation within the central portion of the pit below the area of high surface topography and where sand occurs near surface. Within the northwestern portion of the site, the fine grained surficial material (silt and silty fine sand) prevents the rapid infiltration of water to the water table and thus prevents the establishment of high water table levels. The direction of groundwater movement is outward from the groundwater high toward the north, south, east, and west. As expected, no groundwater seeps or springs were identified on the pit. The deep unconfined groundwater table is monitored at monitoring wells BH05-2, BH05-18, BH05-19, BH06-1, BH12-2, and BH12-2.

A seasonal perched groundwater table occurs within the wetland/pond area within the north-central portion of the pit. It is interpreted that the perched water table is formed as a result of the slow downward movement of groundwater through the underlying silt. The fine grained soil that contains the perched water table is underdrained by the deeper unconfined water table. Groundwater conditions for the perched water table are assessed based on observations at monitoring well BH05-20.

Based on the water table configuration and the surrounding low areas, it is inferred that vertical hydraulic gradients are downward and the pit is located in a groundwater recharge area.

Considering data to May 2008 and the interpreted groundwater table configuration (Jagger Hims Limited, 2009), the pit average base elevation will be about 177.1 m asl (175.6 m asl + 1.5 m) within the central portion of the pit and will vary along the pit perimeter. Updated groundwater elevations for monitoring wells BH12-1 and BH12-2 were also considered in the pit design. Pit base elevations considered the following data.

MONITOR DESIGNATION	MAXIMUM GROUNDWATER ELEVATION (m asl)	DATE	MINIMUM PIT BASE ELEVATION (m asl)
BH05-2	174.74	May 2008	176.3
BH05-18	167.03	April 2007	168.6
BH05-19	159.82	May 2008	161.3
BH06-1	175.62	May 2008	177.1
BH12-1	153.52	November 2012	155.0
BH12-2	173.09	November 2012	174.5

NOTE: ‘m asl’ indicates meters above sea level.

3.4 GROUNDWATER USE

Residential and stock use of groundwater around the pit occurs from both dug wells and drilled wells. Most wells on record with the Ministry of Environment, Conservation and Parks (MECP) are drilled wells, but the results of local water well reconnaissance surveys indicate the presence of a number of dug wells. The dug wells obtain water from an unconfined aquifer, while the drilled wells obtain water from either an unconfined aquifer or deeper confined aquifers.

Eight (8) residential water wells were selected for ongoing monitoring around the pit in accordance with the Site Plan and the PTTW. Only residents at the following six (6) wells initially agreed to participate in the ongoing Performance Monitoring Program. Well locations are shown in Figure 1.

In addition, water wells located over 1.5 km west of the pit at the Codrington Fish Research Centre are included in the Performance Monitoring Program. See Figure 1 for location details.

3.5 SURFACE WATER

On a regional basis, there are few surface watercourses located within 2 km of the pit. One watercourse is Cold Creek, which is about 1 km south of the pit and flows in an easterly direction. A tributary that contributes to Cold Creek originates within 500 m of the pit, as shown in Figure 1, and flows below Old Wooler Road. The status of this tributary is assessed by monitoring station SWC. It is noted that in 2020 the bridge below Old Wooler Road and immediately upstream of station SWC was replaced with a culvert.

Tributaries of Marsh Creek are located north, west, and east of the pit as summarized below.

- About 1 km west of the pit a tributary flows in a northerly direction toward Murray Marsh, which is located about 2 km northeast of the pit. This tributary has a component of groundwater baseflow that is assessed at stations FH-SW1 and FH-SW2, which are located at the Codrington Fish Research Centre.
- Near the southeastern corner of the pit is a tributary of Marsh Creek. Station SWB allows for the ongoing assessment of groundwater baseflow into this watercourse.
- North of the pit are a number of groundwater seeps and springs that combine with runoff to contribute to surface water flow within tributaries that flow toward Marsh Creek.

4. 2021 PIT OPERATION SUMMARY

In 2021, operations at the pit included: material extraction, water taking from one pumping well, and the collection of water in the Settling Pond and Water Storage Pond. There was no extraction below the water table. A site sketch showing the pit conditions in May 2018 (Google Earth) with updated areas of disturbance to December 2021 are provided with in Figure 2.

Water within the Settling Pond and Water Storage Pond includes surface water that originates from runoff and groundwater that can be pumped from two pumping wells located near the Settling Pond in accordance with the PTTW. Only Well PW was used in 2021. A pumping summary for the groundwater taking is provided below. Material washing and dust control occurred in 2021.

YEAR	PUMP STARTING DATE	PUMP STOPPING DATE	TOTAL PUMPED (Cubic Metres)
2016	August 10	November 9	4,341.5
2017	June 7	November 7	9,766.4
2018	February 27	November 12	17,736.9
2019	April 2	December 8	12,859.0
2020	April 27	October 14	10,621.9
2021	June 3	December 16	1,174.6

4.1 COMPLAINTS AND RESPONSES

No formal complaints regarding potential effects of pit operations on water quantity or quality were received in 2021.

5. MONITORING RESULTS

5.1 GROUNDWATER ELEVATIONS AND DEPTHS

Groundwater elevations presented in Figures B-1 through B-8, Appendix B, generally indicate peak levels during the spring and summer in 2021 in response to the spring melt. It is noted that water levels in 2021 were lower than observed in 2020 owing to drier spring and summer conditions. Similarly, the pattern of increasing groundwater elevations from 2016 (commencement of water use) through 2020 at BH05-2, BH05-18, BH05-19, BH06-1, BH12-1, and BH12-2 was not apparent in 2021.

The effect of the seasonal weather conditions is most apparent at BH05-20 within the low-lying area where the perched groundwater table elevations decreased temporarily to below the base of the monitoring well in mid 2021 (summer and early fall). These low water level conditions also occurred temporarily in late 2013 and during the latter half of 2016 through 2020. Typically the water levels at BH05-20 increase rapidly in the late fall (November) or winter as a result of an increase in the amount of precipitation.

Groundwater Trigger Elevations were established for the onsite monitoring wells based on groundwater elevations measured to the end of 2015. These Trigger Elevations represent the minimum groundwater elevations observed with no detectable effect by pit operations. Groundwater elevations that are detected below the Trigger Elevation will initiate a progressive data review process that includes:

- 1) assessing if the low groundwater elevation is a result of pit operations or if it is a natural occurrence related to climate conditions;
- 2) if the low elevation is related to pit operations, confirmatory water level measurements will be collected;
- 3) if the low elevations related to pit operations are confirmed, then mitigation measures will be implemented.

The Groundwater Trigger Elevations and the minimum manual elevations for 2021 are summarized in the following table.

MONITORING WELL DESIGNATION	GROUNDWATER TRIGGER ELEVATION (m ASL)	MINIMUM 2021 GROUNDWATER ELEVATION (m ASL)	ACCEPTABLE GROUNDWATER ELEVATION (Yes/No)
BH05-2	173.30	173.58	Yes
BH05-18	166.43	166.44	Yes
BH06-1	174.03	174.29	Yes
BH12-1	152.39	152.78	Yes
BH12-2	172.74*	173.50	Yes

NOTES:

- 1) ‘m ASL’ indicates metres above sea level.
- 2) Original Groundwater Trigger Elevations updated with 2015 groundwater elevations owing to naturally low groundwater elevations in 2015. Includes data from water level transducers measured at 6 hour intervals and quarterly manual water level measurements. ‘*’ indicates excludes questionable transducer data.
- 3) BH05-19 and BH05-20 removed from Groundwater Trigger Elevation assessment owing to the commencement of onsite pumping in 2016. Both wells are to be decommissioned in accordance with the Site Plan.

The minimum groundwater elevations for 2021 satisfied the Groundwater Trigger Elevations. Therefore, pit operations had no detectable negative impact on groundwater elevations near the pit boundaries in 2021.

Groundwater Trigger Levels were also established for the residential water wells and the water wells located at the Codrington Fish Research Centre. The Groundwater Trigger Depths and the maximum depths for 2021 are summarized in the following table. It is noted that depths are used for the water wells since the geodetic elevations of the wells were not available.

MONITORING WELL DESIGNATION	GROUNDWATER TRIGGER DEPTH (m)	MAXIMUM 2021 GROUNDWATER DEPTH (m)	ACCEPTABLE GROUNDWATER DEPTH (Yes/No)
[REDACTED]	3.71*	3.62	Yes
[REDACTED]	7.1**	Not Available	-
[REDACTED]	2.89	Not Available	-
[REDACTED]	2.39	2.24	Yes
[REDACTED]	2.45*	1.06	Yes
[REDACTED]	3.56	3.38	Yes
CFRC – Well2	Flowing	Flowing	Yes
CFRC – Well 3	1.55	1.66	No
CFRC – Well 4	2.07	2.05	Yes

NOTES:

- 1) ‘m’ indicates metres.
- 2) ‘*’ indicates used 2015 level as no baseline levels available.
- 3) ‘**’ indicates used 2016 level as no baseline levels available.

Residential wells and the wells at the Codrington Fish Research Centre typically showed an increase in groundwater elevations from 2020 to 2021 as a result of greater precipitation in August and September in 2021. One exception was CFRC-Well 3 that showed a decrease in groundwater elevation. Considering that: 1) pit operations had no detectable negative effect on groundwater levels at monitoring wells located closer to the pit property limits and 2) the groundwater levels at the residential wells showed a natural response to climatic conditions, it is concluded that the residential wells and wells at the Codrington Fish Research Centre were not negatively affected by pit operations in 2021.

In summary, there were no observed unacceptable effects to groundwater elevations or depths from operations at the pit in 2021. The Site Plan provides a Water Well Complaint process that details a mitigation process for complaints from residents about the quality or quantity of water within their water well. This process will also be used if the monitoring program identifies an unacceptable pit effect to the well water.

5.2 GROUNDWATER QUALITY

Groundwater Trigger Concentrations were established based on major ions as presented in the Trilinear diagram of Figure 3, as well as based on the Ontario Drinking Water Standards, Objectives, and Guidelines (2006) (ODWSOG) that are included in the chemical summary tables of Tables C-1 through C-6, Appendix C. Major ions include parameters that constitute a major proportion of the water quality, and include: alkalinity, chloride, sulphate, calcium, magnesium, potassium, and sodium.

The Trilinear diagram shows that groundwater obtained from the onsite monitoring wells and the residential water wells in 2021 is generally similar and plots in a similar location to baseline conditions on the diagram. A notable change in groundwater quality will result in a shift in the plotted location of a monitoring well or residential water well on the diagram. Exceptions are as follows.

- Water quality at BH05-20 showed a greater proportion of chloride than the other onsite wells and compared to historic findings at the monitoring well. Sodium concentrations remained low, similar to historic findings, such that road salt is not a likely source of the elevated chloride concentrations. The elevated chloride concentrations do not exceed regulatory limits. As the shallow ground water quality at BH05-20 is influenced most by local land use and surface water within the low-lying area, continued monitoring is recommended.
- Water quality at BH12-1 shows a lower proportion of calcium than the other onsite wells and compared to historic findings. Continued monitoring is recommended.

- Water quality at [REDACTED] shows a greater proportion of chloride and sodium relative to other residential wells, likely as a result of effects from road salt applied to County Road 30.

Figure C-1 to C-3, Appendix C, provide time concentration graphs for total dissolved solids (TDS), nitrate, and total phosphorous to allow for an assessment of water quality changes with time. In general the 2021 concentrations for these three parameters are similar to baseline conditions. One exception is at BH05-20 where the TDS concentrations showed a pattern of increasing concentrations from September 2017 through to 2021. Groundwater quality at BH05-18 continues to show the highest nutrient concentrations (nitrate), likely as a result of agricultural fertilizers, although concentrations have decreased slightly or stabilized from 2018 through 2021.

The following table provides the Trigger Concentrations that are based on 75% of the ODWSOG.

PARAMETER	ODWSOG (mg/L)	TRIGGER CONCENTRATION (mg/L)
TDS	500	375
DOC	5.0	3.75
Sulphate	500	375
Chloride	250	188
Nitrate	10.0	7.5
Aluminum	0.1	0.075
Barium	1.0	0.75
Boron	5.0	3.75
Cadmium	0.005	0.0038
Chromium	0.05	0.038
Copper	1	0.75
Iron	0.3	0.225
Lead	0.01	0.075
Manganese	0.05	0.038
Sodium	200	150
Zinc	5	3.75

NOTE: 'mg/L' indicates milligrams per litre.

Nitrate exceeded the Trigger Concentration in groundwater at BH05-18 for both the March and September monitoring events and at BH05-19 for the March monitoring event only. Aluminum (BH05-19 and BH12-1) as well as DOC, iron, and manganese (BH12-1) concentrations also exceeded the respective Trigger Concentrations. At BH05-20 the TDS concentrations for both monitoring events exceeded the Trigger Concentration. Hardness was excluded from the Trigger Concentrations as groundwater in the area of the pit is naturally hard and typically exceeds the ODWSOG of 100 milligrams per litre (mg/L). For the onsite monitoring wells the level of turbidity also typically exceeds the ODWSOG as a result of the agitation of sediment within the monitoring wells during sampling.

The elevated nitrate concentrations have historically occurred during baseline conditions at both BH05-18 and BH05-19 likely as a result of the application of agricultural fertilizers.

The localized elevated concentrations of TDS, aluminum, DOC, iron, and manganese in groundwater may be a result of the sample turbidity and are not attributed to pit operations. Continued monitoring is recommended.

Bacteria was detected in [REDACTED] at one time or another.

In summary, there were no observed negative effects on groundwater quality from operations at the pit in 2021.

5.3 SURFACE WATER FLOW RATES

Surface water flow rates show a notable difference between stations SWB and SWC as presented in Figure D-1, Appendix D. Station SWB is located right at the groundwater discharge point and thus the flow rates reflect local groundwater elevations. Seasonal patterns or influences from precipitation and overland flow are not apparent. As shown in the following table, the flow rates at SWB for 2021 were low compared to historic baseline flows (2013 to 2015). As the pit operations have not decreased groundwater levels near the pit boundaries, the low flow rates for 2021 reflect natural low flow conditions.

STATION	TRIGGER FLOW RATES (2013 to 2015) (L/s)	2020 FLOW RATES (L/s)
SWB	0.2 – 1.67	<0.1
SWC	<1 – 51.9	<1 – 9.8
FH-SW1	2.3 – 7.4	<1 – 3.6
FH-SW2	4.9 – 69.4	2.3 – 10.8

NOTES:

- 1) ‘L/s’ indicates litres per second.
- 2) Trigger Flow Rates include flow rates measured prior to pumping at the pit.

At station SWC the surface water flow rates show an influence from groundwater baseflow, precipitation, and overland flow. A seasonal pattern of flow rates is apparent with greater flow rates during the spring (March) and lower flow rates during the summer and fall (September). As shown in the table provided above, the flow rates at SWC for 2021 were within the flow rate range for baseline conditions.

At the Codrington Fish Research Centre, the flow rates at stations FH-SW1 and FH-SW2 were within or close to the historic ranges as noted above and shown in Figure D-5, Appendix D. FH-SW1 is located right at a groundwater discharge point, whereas as FH-SW2 is located further from the spring source and shows an influence from groundwater baseflow, precipitation, and overland flow. As operations at the pit have not extracted below the water table, and local groundwater

elevations and surface water flows have not been negatively influenced by pit operations, the flow rates at the Codrington Fish Research Centre are attributed to natural conditions.

5.4 SURFACE WATER QUALITY

Surface Water Trigger Concentrations were established based on major ions as presented in the Trilinear diagram of Figure 3, as well as based on the Provincial Water Quality Objectives (1994 plus updates) (PWQO) that are included in the chemical summary tables of Tables D-1 and D-2, Appendix D.

The Trilinear diagram shows that the surface water quality is similar, and is similar to groundwater quality. A notable change in surface water quality will result in a shift in the plotted location of a station on the diagram.

Figures D-2 to D-4, Appendix D, provide time concentration graphs for total dissolved solids (TDS), nitrate, and total phosphorous to allow for an assessment of water quality changes with time. In general the 2021 concentrations for these three parameters are similar to baseline conditions, with surface water at station SWB generally showing similar to lower concentrations than at station SWC.

The following table provides the Trigger Concentrations that are based on 75% of the PWQO.

PARAMETER	PWQO ($\mu\text{g/L}$)	TRIGGER CONCENTRATION ($\mu\text{g/L}$)
Ammonia (unionized)	0.02*	<0.02**
Aluminum	75	56
Beryllium	1100	825
Boron	200	150
Cadmium	0.5	0.375
Chromium	8.9	6.68
Cobalt	0.9	0.68
Copper	5	3.75
Iron	300	225
Lead	25.0	18.8
Molybdenum	40	30
Nickel	25	18.8
Phosphorus	30	22.5
Silver	0.1	0.1**
Vanadium	6	4.5
Zinc	20	15

NOTES:

- 1) ‘ $\mu\text{g/L}$ ’ indicates micrograms per litre.
- 2) ‘**’ indicates value is milligrams per litre (mg/L).
- 3) ‘***’ indicates Trigger Concentration is analytical method detection limit.

Surface water quality naturally satisfies the Trigger Concentrations and PWQO, except for total phosphorus and silver (September) at station SWB and for iron, total phosphorus, and silver (September) at station SWC. Concentrations for total phosphorus are representative of local baseline groundwater quality prior to pit operations. The silver concentrations of 0.2 µg/L are close to the analytical method detection limit of 0.1 µg/L and may reflect a false positive. A second pattern of note is that parameter concentrations tend to be greater at station SWC compared to station SWB, likely as a result of the contribution of overland flow and its influence on soil erosion at station SWC.

In summary the surface water quality shows no negative effects from the pit operations.

6. 2022 MONITORING PROGRAM

Based on the 2021 monitoring program findings, it is recommended that the Performance Monitoring Program detailed in the Site Plan and PTTW, and presented in Table 1, be continued in 2022. The 2022 Monitoring Program Report should be completed prior to March 31, 2023.

7. CONCLUSIONS AND RECOMMENDATIONS

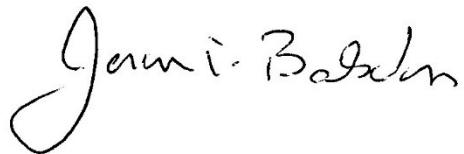

Based on the findings presented in this report, we are pleased to provide the following conclusions.

- Groundwater elevations, depths, and quality showed no unacceptable effects from the pit operations in 2021 and tended to show the typical seasonal patterns observed for baseline conditions. Groundwater quality at the residential water wells continued to reflect natural conditions in 2021 and no formal water well complaints about pit operations were received from residents in 2021.
- Surface water flow rates and quality showed no effects from the pit operations in 2021, but were influenced by the seasonal weather conditions and some erosion of the watercourses.

The following recommendations are provided for consideration in 2022.

- Groundwater and surface water monitoring and reporting should continue in 2022 as outlined in Section 6 of this report.

MONITORING PROGRAM			
MONITORING LOCATIONS	FREQUENCY	PARAMETERS	COMMENTS
GROUNDWATER			
BH05-2, BH05-18, BH05-19, BH06-1, BH12-1 (formerly A), BH12-2 (formerly C)	Quarterly	Water Levels	BH05-19 and BH05-20 will be decommissioned during extraction.
	Semiannually	Field parameters, inorganics, metals	
	Annually if onsite fueling or fuel storage.	Petroleum Hydrocarbons	
Six (6) Residential Wells within 1 km*	Annually	Water Levels	Proposed residential wells include: 1 north of site, 1 east of site, and 4 along Old Wooler Road.
	Annually	Field parameters, inorganics, metals, microbiological.	
Fish Hatchery Wells (assume 2)	Semiannually	Water Levels	Where access is granted.
SURFACE WATER			
SWB, SWC	Semiannually	Flow Rates	Tributaries of Marsh Creek and Cold Creek.
	Semiannually	Field Parameters, Inorganics, Metals	
Fish Hatchery Springs	Semiannually	Flow Rates	Where access is granted.
	Annually	Field Parameters	

NOTES:

- 1) * denotes wells to be sampled will depend on access approval by landowner.
- 2) Quarterly indicates March, June, September, and December.
- 3) Annually indicates September.
- 4) Semiannually indicates March and September.
- 5) Field parameters include: pH, temperature, conductivity, turbidity, and dissolved oxygen.
- 6) Inorganics include: TDS, hardness, total ammonia, conductivity, DOC, orthophosphate, pH, sulphate, alkalinity, chloride, nitrite, and nitrate.
- 7) Metals include: aluminum, barium, beryllium, boron, cadmium, calcium, chromium, cobalt, copper, iron, lead, magnesium, manganese, molybdenum, nickel, phosphorus, potassium, silver, sodium, strontium, vanadium, and zinc.
- 8) Petroleum Hydrocarbons include: BTEX and PH (F2 to F4).
- 9) Microbiological includes: background, total coliforms, E-Coli, and streptococci.
- 10) Precipitation conditions will be documented prior to sampling springs and undertaking sampling activities.

Permit To Take Water Number 8025-
A9NQBU

PERMIT TO TAKE WATER
Surface and Ground Water
NUMBER 8025-A9NQBU

Pursuant to Section 34.1 of the Ontario Water Resources Act, R.S.O. 1990 this Permit To Take Water is hereby issued to:

St. Marys Cement Inc. (Canada)
55 Industrial Street
Toronto, Ontario M4G 3W9
Canada

For the water

taking from: Settling Pond Network
Pumping Well - PW
Pumping Well - PW2

Located at: Lot 33, Concession 6, Geographic Township of Murray
Brighton, County of Northumberland

For the purposes of this Permit, and the terms and conditions specified below, the following definitions apply:

DEFINITIONS

- (a) "Director" means any person appointed in writing as a Director pursuant to section 5 of the OWRA for the purposes of section 34.1, OWRA.
- (b) "Provincial Officer" means any person designated in writing by the Minister as a Provincial Officer pursuant to section 5 of the OWRA.
- (c) "Ministry" means Ontario Ministry of the Environment and Climate Change.
- (d) "District Office" means the Peterborough District Office.
- (e) "Permit" means this Permit to Take Water No. 8025-A9NQBU including its Schedules, if any, issued in accordance with Section 34.1 of the OWRA.
- (f) "Permit Holder" means St. Marys Cement Inc. (Canada).
- (g) "OWRA" means the *Ontario Water Resources Act*, R.S.O. 1990, c. O. 40, as amended.

You are hereby notified that this Permit is issued subject to the terms and conditions outlined below:

TERMS AND CONDITIONS

1. Compliance with Permit

- 1.1 Except where modified by this Permit, the water taking shall be in accordance with the application for this Permit To Take Water, dated February 20, 2016 and signed by Colin Evans, and all Schedules included in this Permit.
- 1.2 The Permit Holder shall ensure that any person authorized by the Permit Holder to take water under this Permit is provided with a copy of this Permit and shall take all reasonable measures to ensure that any such person complies with the conditions of this Permit.
- 1.3 Any person authorized by the Permit Holder to take water under this Permit shall comply with the conditions of this Permit.
- 1.4 This Permit is not transferable to another person.
- 1.5 This Permit provides the Permit Holder with permission to take water in accordance with the conditions of this Permit, up to the date of the expiry of this Permit. This Permit does not constitute a legal right, vested or otherwise, to a water allocation, and the issuance of this Permit does not guarantee that, upon its expiry, it will be renewed.
- 1.6 The Permit Holder shall keep this Permit available at all times at or near the site of the taking, and shall produce this Permit immediately for inspection by a Provincial Officer upon his or her request.
- 1.7 The Permit Holder shall report any changes of address to the Director within thirty days of any such change. The Permit Holder shall report any change of ownership of the property for which this Permit is issued within thirty days of any such change. A change in ownership in the property shall cause this Permit to be cancelled.

2. General Conditions and Interpretation

2.1 Inspections

The Permit Holder must forthwith, upon presentation of credentials, permit a Provincial Officer to carry out any and all inspections authorized by the OWRA, the *Environmental Protection Act*, R.S.O. 1990, the *Pesticides Act*, R.S.O. 1990, or the *Safe Drinking Water Act*, S.O. 2002.

2.2 Other Approvals

The issuance of, and compliance with this Permit, does not:

- (a) relieve the Permit Holder or any other person from any obligation to comply with any other applicable legal requirements, including the provisions of the *Ontario Water Resources Act*, and the *Environmental Protection Act*, and any regulations made thereunder; or
- (b) limit in any way any authority of the Ministry, a Director, or a Provincial Officer, including the authority to require certain steps be taken or to require the Permit Holder to furnish any further information related to this Permit.

2.3 Information

The receipt of any information by the Ministry, the failure of the Ministry to take any action or require any person to take any action in relation to the information, or the failure of a Provincial Officer to prosecute any person in relation to the information, shall not be construed as:

- (a) an approval, waiver or justification by the Ministry of any act or omission of any person that contravenes this Permit or other legal requirement; or
- (b) acceptance by the Ministry of the information's completeness or accuracy.

2.4 Rights of Action

The issuance of, and compliance with this Permit shall not be construed as precluding or limiting any legal claims or rights of action that any person, including the Crown in right of Ontario or any agency thereof, has or may have against the Permit Holder, its officers, employees, agents, and contractors.

2.5 Severability

The requirements of this Permit are severable. If any requirements of this Permit, or the application of any requirements of this Permit to any circumstance, is held invalid or unenforceable, the application of such requirements to other circumstances and the remainder of this Permit shall not be affected thereby.

2.6 Conflicts

Where there is a conflict between a provision of any submitted document referred to in this Permit, including its Schedules, and the conditions of this Permit, the conditions in this Permit shall take precedence.

3. Water Takings Authorized by This Permit

3.1 Expiry

This Permit expires on **June 10, 2026**. No water shall be taken under authority of this Permit after the expiry date.

3.2 Amounts of Taking Permitted

The Permit Holder shall only take water from the source, during the periods and at the rates and amounts of taking specified in Table A. Water takings are authorized only for the purposes specified in Table A.

Table A

	Source Name / Description:	Source Type:	Taking Specific Purpose:	Taking Major Category:	Max. Taken per Minute (litres):	Max. Num. of Hrs Taken per Day:	Max. Taken per Day (litres):	Max. Num. of Days Taken per Year:	Zone/ Easting/ Northing:
1	Settling Pond Network	Pond Dugout	Aggregate Washing	Industrial	9,092	12	6,546,240	313	18 277983 4893013
2	Pumping Well - PW	Well Drilled	Aggregate Washing	Industrial	60	24	86,400	313	18 277897 4892840
3	Pumping Well - PW2	Well Drilled	Aggregate Washing	Industrial	60	24	86,400	313	18 277928 4892971
					Total Taking:		6,719,040		

4. Monitoring

- 4.1 The Permit Holder shall maintain a record of all water takings. This record shall include the dates and times of water takings and the total measured amounts of water taken per day for each day that water is taken under the authorization of this Permit. A separate record shall be maintained for each source. The Permit Holder shall keep all required records up to date and available at or near the site of the taking and shall produce the records immediately for inspection by a Provincial Officer upon his or her request.
- 4.2 The total amounts of water taken shall be measured using a flow meter and totalizer.
- 4.3 The "Performance Monitoring Program" shall be undertaken as described in the application for this Permit however the following two changes shall also be incorporated into the program:
 - 1) The domestic wells at 230 Old Wooler Road and 22 Ferguson Hill Road shall be explicitly added to the monitoring program and the frequency of water level measurement shall be quarterly at these wells (with the permission of the well owner); and,
 - 2) Groundwater trigger depths shall be determined for the domestic wells at 230 Old Wooler Road and 22 Ferguson Hill Road. This information shall be determined prior to any water taking at pumping wells PW or PW2. These domestic wells shall be added to the overall monitoring, assessment and contingency programs described in the application for this Permit.

If the domestic well owners that are part of the "Performance Monitoring Program" for the site do not provide access for monitoring of their well(s), this information shall be

provided to the Director in writing within 60 days of the refusal to provide access.

4.4 The Permit Holder shall retain a qualified person to prepare and submit a report to the MOECC on an annual basis prior to March 31 of each year: The report shall include (but not be limited to) the following items:

- an analysis of the monitoring results and daily water takings; and,
- provide conclusions and make recommendations based on the monitoring

results.

5. Impacts of the Water Taking

5.1 Notification

The Permit Holder shall immediately notify the local District Office of any complaint arising from the taking of water authorized under this Permit and shall report any action which has been taken or is proposed with regard to such complaint. The Permit Holder shall immediately notify the local District Office if the taking of water is observed to have any significant impact on the surrounding waters. After hours, calls shall be directed to the Ministry's Spills Action Centre at 1-800-268-6060.

5.2 For Surface-Water Takings

The taking of water (including the taking of water into storage and the subsequent or simultaneous withdrawal from storage) shall be carried out in such a manner that streamflow is not stopped and is not reduced to a rate that will cause interference with downstream uses of water or with the natural functions of the stream.

For Groundwater Takings

If the taking of water is observed to cause any negative impact to other water supplies obtained from any adequate sources that were in use prior to initial issuance of a Permit for this water taking, the Permit Holder shall take such action necessary to make available to those affected, a supply of water equivalent in quantity and quality to their normal takings, or shall compensate such persons for their reasonable costs of so doing, or shall reduce the rate and amount of taking to prevent or alleviate the observed negative impact. Pending permanent restoration of the affected supplies, the Permit Holder shall provide, to those affected, temporary water supplies adequate to meet their normal requirements, or shall compensate such persons for their reasonable costs of doing so.

If permanent interference is caused by the water taking, the Permit Holder shall restore the water supplies of those permanently affected.

5.3 Prevention of Adverse Effects:

The Permit Holder shall ensure the taking of water under authority of this Permit does not result in an adverse effect on area waters.

5.4 Prevention of Structural Adverse Effects:

The Permit Holder shall take all measures necessary to prevent damage to buildings, bridges,

structures, roads and/or railway lines that may be impacted either directly or indirectly by this taking.

6. Director May Amend Permit

The Director may amend this Permit by letter requiring the Permit Holder to suspend or reduce the taking to an amount or threshold specified by the Director in the letter. The suspension or reduction in taking shall be effective immediately and may be revoked at any time upon notification by the Director. This condition does not affect your right to appeal the suspension or reduction in taking to the Environmental Review Tribunal under the *Ontario Water Resources Act*, Section 100 (4).

The reasons for the imposition of these terms and conditions are as follows:

1. Condition 1 is included to ensure that the conditions in this Permit are complied with and can be enforced.
2. Condition 2 is included to clarify the legal interpretation of aspects of this Permit.
3. Conditions 3 through 6 are included to protect the quality of the natural environment so as to safeguard the ecosystem and human health and foster efficient use and conservation of waters. These conditions allow for the beneficial use of waters while ensuring the fair sharing, conservation and sustainable use of the waters of Ontario. The conditions also specify the water takings that are authorized by this Permit and the scope of this Permit.

*In accordance with Section 100 of the Ontario Water Resources Act, R.S.O. 1990, you may by written notice served upon me, the Environmental Review Tribunal and the Environmental Commissioner, **Environmental Bill of Rights**, R.S.O. 1993, Chapter 28, within 15 days after receipt of this Notice, require a hearing by the Tribunal. The Environmental Commissioner will place notice of your appeal on the Environmental Registry. Section 101 of the Ontario Water Resources Act, as amended provides that the Notice requiring a hearing shall state:*

1. The portions of the Permit or each term or condition in the Permit in respect of which the hearing is required, and;
2. The grounds on which you intend to rely at the hearing in relation to each portion appealed.

In addition to these legal requirements, the Notice should also include:

3. The name of the appellant;
4. The address of the appellant;
5. The Permit to Take Water number;
6. The date of the Permit to Take Water;
7. The name of the Director;
8. The municipality within which the works are located;

This notice must be served upon:

*The Secretary
Environmental Review Tribunal
655 Bay Street, 15th Floor
Toronto ON
M5G 1E5
Fax: (416) 326-5370
Email:
ERTTribunalsecretary@ontario.ca*

*This instrument is subject to Section 38 of the **Environmental Bill of Rights** that allows residents of Ontario to seek leave to appeal the decision on this instrument. Residents of Ontario may seek to appeal for 15 days from the date this decision is placed on the Environmental Registry. By accessing the Environmental Registry, you can determine when the leave to appeal period ends.*

Dated at Toronto this 14th day of June, 2016.

Greg Faaren
Director, Section 34.1
Ontario Water Resources Act , R.S.O. 1990

Schedule A

This Schedule “A” forms part of Permit To Take Water 8025-A9NQBU, dated June 14, 2016.

NOTES:

- 1) "m asl" indicates metres above sea level.
- 2) *** denotes water level based on pressure transducer owing to manual measurement interference by bentonite on well pipe sides.
- 3) CFRC indicates Codrington Fish Research Centre. No elevation survey of wells, thus depths below top of casing are provided.
- 4) Blank indicates water level not measured.
- 5) NM indicates not measured.

NOTES:

1. OWDWO indicates Ontario Drinking Water Objectives (2006).
2. Bolding and shading denotes concentration exceeds ODWQO.
3. mg/L indicates milligrams per litre.
4. Blank denotes no ODWQO or parameter not tested..
5. ** indicates value based on lab value.

NOTES:

1. OWDWO indicates Ontario Drinking Water Objectives (2006).
2. Bolding and shading denotes concentration exceeds ODWQO.
3. mg/L indicates milligrams per litre.
4. Blank denotes no ODWQO or parameter not tested..
5. ** indicates value based on lab value.

NOTES:

1. OWDWO indicates Ontario Drinking Water Objectives (2006).
2. Bolding and shading denotes concentration exceeds ODWQO.
3. mg/L indicates milligrams per litre.
4. Blank denotes no ODWQO or parameter not tested..
5. ** indicates value based on lab value.

NOTES:

1. OWDWO indicates Ontario Drinking Water Objectives (2006).
2. Bolding and shading denotes concentration exceeds ODWQO.
3. mg/L indicates milligrams per litre.
4. Blank denotes no ODWQO or parameter not tested..
5. ** indicates value based on lab value.

NOTES:

1. OWDWO indicates Ontario Drinking Water Objectives (2006).
2. Bolding and shading denotes concentration exceeds ODWQO.
3. mg/L indicates milligrams per litre.
4. Blank denotes no ODWQO or parameter not tested..
5. ** indicates value based on lab value.

NOTES:

1. ODWSOG - Ontario Drinking Water Standards, Objectives and Guidelines (2003), updated June 2006.
2. (*) denotes health related drinking water standard.
3. OG denotes the Operational Guidelines.
4. AO denotes Aesthetic Objective.
5. Bolding and shading denotes concentration exceeds ODWSOG. NDOGN indicates no data owing to overgrowth of nontarget parameters.
6. mg/L indicates milligrams per litre. µg/L indicates micrograms per litre.
7. Blank denotes no ODWSOG has been set yet.
8. CFU/100ml denotes number of colony forming units per 100 millilitres of water.
9. <* denotes less than detection limit (not detected).

NOTES:

1. ODWSOG - Ontario Drinking Water Standards, Objectives and Guidelines (2003), updated June 2006.

2. (*) denotes health related drinking water standard.

3. OG denotes the Operational Guidelines.

4. AO denotes Aesthetic Objective.

5. Bolding and shading denotes concentration exceeds ODWSOG.

6. mg/L indicates milligrams per litre. µg/L indicates micrograms per litre.

7. Blank denotes no ODWSOG has been set yet.

8. CFU/100ml denotes number of colony forming units per 100 millilitres of water.

9. <* denotes less than detection limit (not detected).

NOTES:

1. PWQO indicates Provincial Water Quality Objectives (1994 plus updates).
2. Bolding and shading denotes concentration exceeds PWQO.
3. mg/L indicates milligrams per litre; µg/L denotes microgram per litre.
4. Blank denotes no PWQO or parameter not tested..
5. EF indicates equipment failure.

Zinc (Zn)	µg/L	20	10	6	<5	18	8	8						

NOTES:

1. PWQO indicates Provincial Water Quality Objectives (1994 plus updates).
2. Bolding and shading denotes concentration exceeds PWQO.
3. mg/L indicates milligrams per litre; µg/L denotes microgram per litre.
4. Blank denotes no PWQO or parameter not tested..
5. EF indicates equipment failure.
